### The Foundations of Mind

The Origins of Conceptual Thought  
JEAN MATTER MANDLER

This book offers a theory of how human conceptual life begins, and shows how perceptual information becomes transformed into concepts. Drawing on extensive research, Mandler describes the development of preverbal concept formation, inductive inference, and recall, and explains how these processes form the conceptual basis for language and adult thought.

With contributions from leaders in autism research, the book describes the latest advances in research, discusses way forward for future research, and presents new techniques for understanding this disorder.

### The Cradle of Thought

Exploring the Origins of Thinking  
PETER HOBSON

"There is much to admire in this immensely readable book, and Hobson is both an outstanding scholar and passionate about his subject. His human and clinical concern for people comes through clearly in his writing, and his book will be a welcome contribution to the debate in cognitive development." —Simon Baron-Cohen, *Nature*

"How does a child develop the capacity to think? In particular, how does it develop a sense of self, of the existence of other persons with minds of their own, and of its relationship to these others? . . . For Hobson, the key lies in that one word, relationship. . . . Any parent reading his account will recognise it makes sense."

### What Is Language Development?

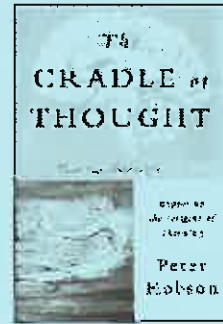

Rationalist, Empiricist, and Pragmatist Approaches to the Acquisition of Syntax  
JAMES RUSSELL

This is the first balanced account of the key competing theories of language development, allowing students and researchers interested in language to evaluate the competing theories and form their own opinions.

### Early Category and Concept Development

Making Sense of the Blooming, Buzzing Confusion

Edited by DAVID H. RAKISON and LISA M. OAKES

"This is about as close as it gets to a perfect 'state of the art' volume, in which all of the leading researchers of infants' and young children's categorization skills summarize their most recent work and thoughts." —Michael Tomasello, Ph.D., Co-Director, Max Planck Institute for Evolutionary Anthropology

"This collection is an illustration of cognitive science at its best."

### The Essential Child

Origins of Essentialism in Everyday Thought  
SUSAN A. GELMAN

"Susan Gelman's *The Essential Child* is both deep and accessible. She does the field a great service just by pulling together her truly remarkable research program into one integrated story. In doing so, she shows how the data that support the claim that young children have essentialist commitments challenge deeply held views about the nature of young children's thinking and about the nature of human concepts in general. Anybody concerned with understanding conceptual development and anybody concerned with understanding human concepts should read this book."

—Susan E. Carey, *Professor of Psychology, Harvard University*

"This is a path-breaking book on children's conceptual development with important implications for virtually all of cognitive science." —Douglas Medin, *Professor of Psychology, Northwestern University*

## Theories of Infant Development

Edited by J. GAVIN BREMNER, ALAN SLATER  
Lancaster University; Exeter University

*"This excellent volume will be of interest not just to infancy researchers and their students, but to all scientists who adopt a developmental perspective to understand human psychological functioning."*

*Jeffrey J. Lockman, Professor of Psychology, Tulane University*

This volume provides an authoritative, up-to-date survey of theories of infant development. The contributors, who are all leaders in their field, present a wide range of theoretical perspectives on development in infancy. Each one provides an advanced treatment of the issues and addresses current theoretical controversies in their area of expertise.

The book is divided into three major sections, covering the development of perception and action, cognitive development, and social development and communication. Within these sections, each of the book's twelve chapters presents a specific theoretical approach or reviews contrasting theories in a particular area. The editors provide a preface linking and contextualizing the material.

## Message from ICIS 2004 Co-chairs

Welcome to each and every delegate at the XIV biennial conference of the International Society on Infant Studies. This year's conference features a variety of presentation formats, including keynote addresses, dialogues, breakfast round-table discussions, symposia, and posters. We hope that the conference will provide the intellectual stimulation and collegial engagement needed to promote an understanding of infants appropriate for the 21<sup>st</sup> Century.

After Bennett Bertenthal's keynote address on Wednesday, please join us for a welcoming reception (6:15 in the Red Lacquer Room) for hors d'oeuvres and drinks.

We are very grateful to many people who helped make ICIS 2004 Chicago happen.

- We benefited from the advice and wisdom of the chairs and co-chairs of ICIS 1998 (Atlanta), ICIS 2000 (Brighton), ICIS 2002 (Toronto).
- Members of the ISIS executive board (especially, Arnold Sameroff, Rachel Keen, and Joseph Campos) provided encouragement and advice.
- John Kozak, Executive Vice President of Academic Affairs, DePaul University provide logistical support.
- Johnson & Johnson Pediatric Institute provided a generous contribution to our educational program.
- Lawrence Erlbaum Associates contributed to the educational program.
- Gerber Foods sponsored a special invited symposium.
- Amber Tyler created the web-site for the conference, coordinated the volunteer help, supervised registration, exhibits, and advertisements.
- Ilona Chmiel, and Sarah Fatani created and managed the Access database and mass e-mails and Christiana Shafer provided extra "hands and feet".
- Ian Hall created the program CD and web-page.
- Mindy Hall planned the gala reception at the Art Institute (although that had to be canceled) and arranged for the entertainment during the "Welcome" reception.
- Ken Schneider supervised our interaction with the Hotel to ensure that we obtained the very best service.
- A very dedicated volunteer group of DePaul University undergraduate students staffed the conference registration and help desks
- Panel chairs and reviewers (whose names are listed on page iii) helped us create an excellent program.
- Finally, we thank all of the presenters at ICIS 2004, who are the excellent program!

## RESEARCH IN HUMAN DEVELOPMENT

*The Official Journal of the  
Society for the Study of Human Development*  
Editor: Jacquelynne Eccles

### Editorial Scope

Research in human development is moving away from an isolated emphasis on particular stages ranging from infancy to later adulthood and from a reduction of multiple levels of organization to variables or processes associated with one discipline. Accordingly, *Research in Human Development (RHD)* seeks to promote a shift away from research focused on development at particular stages (early childhood, adolescence, middle age, older adulthood) and from separate fields of inquiry to a more inclusive, integrative, and interdisciplinary approach to the study of human development across the entire life span. To encompass such breadth, the publications will incorporate a variety of research methods—from quantitative to qualitative.

### Audience

Researchers, educators, policymakers, and practitioners in all fields interested in human development.

## PARENTING

*Science and Practice*  
Editor: Marc H. Bornstein

### Editorial Scope

*Parenting: Science and Practice* strives to promote the exchange of empirical findings, theoretical perspectives, and methodological approaches from all disciplines that help to define and advance theory, research, and practice in parenting, caregiving, and childrearing broadly construed. "Parenting" is interpreted to include biological parents and grandparents, adoptive parents, nonparental caregivers, and others, including infrahuman parents. Articles on parenting itself, antecedents of parenting, parenting effects on parents and on children, the multiple contexts of parenting, and parenting interventions and education are all welcome. The journal is committed to bring parenting to science and science to parenting.

### Audience

*Parenting: Science and Practice* will appeal to scholars and practitioners in psychology, human development, family science, clinical practice, social work, education, pediatrics, psychiatry, sociology, anthropology, demography, and related disciplines. ## REGRESSION PERIODS IN HUMAN INFANCY

Edited by  
Mikael Heimann

Regression periods play a central role in the psychological development of the human baby. Studies of infants have identified 10 periods of regression, or a return to a high frequency of mother-infant contact, within the first 20 months of life. These periods of emotional insecurity in the child signal forthcoming periods of developmental advance and the emergence of an array of new skills as a consequence of parent-infant conflict over body contact and the renegotiation of old privileges. Forming the core of this book, the replication studies performed in Sweden, Spain, and England provide support that regression periods are a real phenomenon and should be dealt with accordingly whenever developmental processes in infancy are discussed.

# ISIS International Society on Infant Studies

## 15<sup>th</sup> Biennial International Conference on Infant Studies

Brisbane Convention and Exhibition Centre  
Brisbane, Queensland, Australia  
8 - 11 July 2006

The International Conference on Infant Studies (ICIS) will be held in Brisbane, Australia, 8 - 11 July 2006, chaired by Curtis Samuels. It should be a memorable and beautiful meeting. ICIS has coordinated with the ISSBD meetings, which will be held in Melbourne, Australia on 3 - 6 July 2006. July is wintertime in Australia (they call it "Down Under") and this is the ideal season (perfect swimming weather) to visit the Great Barrier Reef, a one hour flight away, which is deservedly one of the natural wonders of the world!

Brisbane, capital of Queensland, Australia's 'Sunshine State', greets visitors with a warm and friendly welcome. Brisbane is Australia's only sub-tropical capital city. Sophisticated yet friendly, downtown Brisbane offers the perfect refuge for locals and visitors alike. Brisbane's surrounding regions boast a feast of spectacular experiences. Refresh in World Heritage listed rainforest, laze on sun-drenched beaches, explore the untouched charm of country towns, head south to the Gold Coast or north to the Sunshine Coast (home to the Crocodile Hunter), cuddle koalas or hand feed dolphins in the wild ... all within an hour's reach of downtown. Convenient access to a complete range of Queensland destinations makes Brisbane the perfect launch pad to a host of other world-renowned attractions including the Daintree and the Great Barrier Reef ... all on Brisbane's doorstep.

Papers, posters, symposia, a daily keynote address, debates, and more will be included. You'll find fantastic and fresh Australian seafood, wonderful wines, and magnificent scenery. If you have not been to South Bank (Brisbane), you will find the location exciting (world class art gallery, museum, parklands including a kid-safe beach, casino, clean and safe city location, restaurants galore, and river shuttles and boats). ICIS in 2006 is an opportunity for the entire family!
